

eRoom | offlineExplorer 2.0

Permanent archiving of eRoom content – now even faster and easier!

With eRoom | offlineExplorer 2.0 YADA has developed an innovative add-on for eRoom that permits permanent archiving of rooms.

Your eRoom and new, additional benefits

The eRoom work environment is a secure, web-based work area that can be quickly and easily customized for specific projects, processes or business projects. Companies use eRoom as a work environment to cooperate closely and in a results-oriented fashion with employees within the company, as well as with external business partners, suppliers, and clients.

Your Situation

Over the years, unused rooms collect on the eRoom server – quite often as completed projects. These rooms clog up the server, weigh down backups, and take up online storage capacity. eRoom | offlineExplorer was developed specifically for this purpose. The following are typical applications for the permanent archiving of eRoom content:

- » Reducing infrastructure costs by archiving rooms and then deleting them from the server
- » Archiving eRoom content in order to meet legal and corporate regulations (compliance)
- » Cleaning up the eRoom server before an upcoming upgrade or migration (for example, to EMC CenterStage Pro or Microsoft SharePoint)

Functionality and Format

eRoom | offlineExplorer 2.0 allows you to create a copy of a room that can be read entirely offline. This archived room will be saved with all its content such as documents, project plans, databases, discussions, approvals, notes, links, etc., as well as with components of the user interface and hierarchical structures.

This room is archived offline and can be opened with any standard Web browser. A special viewer is not necessary.

Rooms archived offline are saved as Windows folders. Each element consists of its own folder, an XML file for storing metadata, and the content and saved Office documents.

This allows any search engine to index and retrieve the archived rooms and their content.

Overview

- » Creates a copy of the room that can be read entirely offline
- » Allows eRoom content to be archived in accordance with legal and corporate regulations (compliance)
- » Rooms archived offline can be opened without special viewers. Users only require a PC with a standard Web browser.
- » Rooms archived offline can be stored in Windows file systems or in document management systems.
- » Search engines can index and retrieve the archived rooms and their content.
- » Quick and easy out-of-the-box installation

Compliance

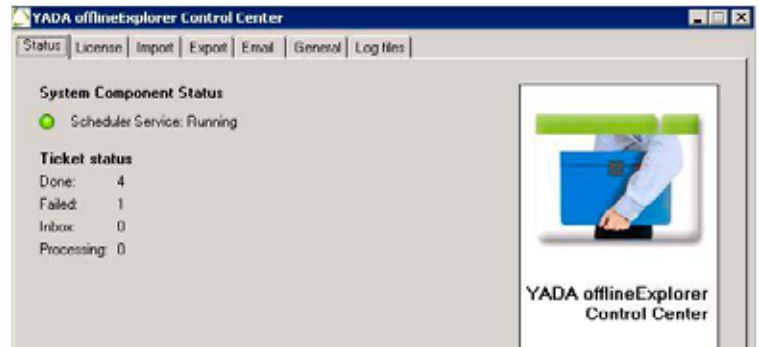

This universal archiving format makes it possible for the first time ever to permanently archive eRoom content in accordance with legal and corporate regulations (compliance).

Application and Operation

eRoom | offlineExplorer 2.0 is installed directly on the eRoom server. It is operated through the eRoom user interface and is only visible for approved users. eRoom | offlineExplorer 2.0 can be configured using Control Center (see figure).

Integration

eRoom | offlineExplorer 2.0 can be integrated into other applications. For example, an export process can be initiated automatically as part of a clean-up project with eRoom | Lifecycle Manager or eRoom | Migration Manager.

We Have the Right Model for You – Be It Full License or Export Bundles

eRoom | offlineExplorer 2.0 can be purchased as a limited or unlimited product.

- » We offer a full license that allows the export of an unlimited number of rooms for long-term use or for archiving a large number of rooms.
- » To archive fewer rooms, you can purchase a basic license and corresponding export bundle licenses. This model provides cost-effective export starting at ten rooms. Additional export bundles for the archiving of individual rooms can be purchased at any time.
